(57) ABSTRACT

A cosmetic composition, comprising the following components (A), (B), (C), and (D):

- (A) from 0.01 to 50% by mass of a fluorine-modified silicone having a polysiloxane unit represented by the following formulae (1) and (2):
 - wherein, Rf represents a perfluoroalkyl group having 6 carbon atoms; R^1 , R^2 , and R^3 each represent a hydrocarbon group having 1 to 6 carbon atoms; m represents a number of from 2 to 6; n represents a number of from 1 to 6; p represents a number of from 3 to 50; s represents a number of from 1 to 5; and a ratio between p and s satisfies $0.66 \le p/(p+s) \le 0.9$,
- (B) from 0.01 to 40% by mass of a powder having been subjected to a surface treatment with tridecafluoro octyltriethoxysilane,
- (C) from 0.01 to 20% by mass of a fine zinc oxide particle having a specific surface area of from 10 to $100 \, \text{m}^2/\text{g}$, with the proviso that the component (B) is excluded from the component (C), and
- (D) from 0.01 to 10% by mass of a specific poly(N-acylalky-leneimine)-modified organopolysiloxane,
 - and wherein, a mass ratio of the component (A) to the component (D), (A)/(D), is from 0.1 to 100.
